Summary

AI and full-stack engineer with a strong background in building real-time, high-traffic applications. Delivered a high-traffic AI matching framework using Python, FastAPI and OpenAI APIs, achieving 99.9% uptime and cutting latency, and built end-to-end features and SDKs at DXC Technology that reduced loading stalls by over 20%. Seeking to apply expertise in AI integration, scalable backend services, and CI/CD pipelines to drive innovative product development.

TECHNICAL SKILLS

- **Languages & Frameworks:** Python, Rust, Type, JavaScript, FastAPI, Async I/O, React, Next.js
- **Real-Time & Systems:** WebRTC, Real-Time Data Sync, SDK Development, API Contract Design (Pydantic/OpenAPI)-, Latency Reduction, Race Condition Resolution
- **Cloud & Databases:** PostgreSQL, Firestore, Firebase, Ecosystem, Docker, CI/CD Pipelines (GitHub Actions), Serverless Architecture
- **Testing & Observability:** Prometheus, Grafana, System Monitoring, API Contract Checks, Code Reviews, ADRs (Architecture Decision Records)

PROFESSIONAL EXPERIENCE

Saayam for all | Gen AI Engineer (Volunteer) **Mar 2026 - Present**

- Architected high-traffic, real-time AI matching frameworks and end-to-end data pipelines using Python, FastAPI, and OpenAI APIs; optimized PostgreSQL queries, led open-source-aligned code reviews, and automated CI/CD release workflows, which improved deployment speed and increased pipeline reliability
- Engineered robust request-queuing logic and tuned low-latency client-server data flows with React Query and Firebase, eliminating redundant processing, securing 99.9% uptime during traffic surges, and minimizing overall processing latency

DXC Technology | Full Stack Developer **Jan 2025 - Mar 2026**

- Designed and deployed new features and SDKs with React, TypeScript, and FastAPI, cutting loading stalls by 20%+ and eliminating API failures through automated contract checks and improved deployment pipelines.

Trinary Bits Technologies Pvt. Ltd. | Web Application Developer **Jan 2021 - Jul 2023**

- Developed FastAPI microservices and integrated external ML APIs using Python, Pydantic, and Rust prototypes for core SDK modules, engineered retry/backoff logic and tuned network behavior with Axios interceptors to prevent UI lockups and reduce perceived load times by 20–25%

PROJECTS

AI Math Solver | [Live Demo](#)

- Engineered an AI-driven math engine featuring modular classification and OpenAPI-documented REST APIs, implementing asynchronous processing and dynamic ML routing to guarantee stable, sub-second performance during high-concurrency tasks.

Vehicle Image Recognition & Deployment Pipeline | [Github](#)

- Built an automated recognition pipeline with a custom CNN classifier containerized in Docker and integrated with GitHub Actions CI/CD workflows, deploying onto AWS SageMaker to ensure highly predictable real-time inference latency.

Breast Cancer Detection Platform | [Github](#)

- Developed an end-to-end medical ML pipeline served via a Flask API with integrated explainability outputs, optimizing preprocessing steps and batching prediction logic to maximize inference throughput without compromising accuracy.

Enterprise Inventory & Order Management Database | [Github](#)

- Architected a highly secure enterprise relational schema with 15+ normalized tables, utilizing custom SQL triggers, functions, and stored procedures that automated transactional stock-flow tracking and dramatically slashed report execution times.

Infrastructure Automation & System Monitoring | [Github](#)

- Automation & System Monitoring: Engineered an automated multi-VM provisioning architecture using modular Ansible roles while deploying Prometheus and Grafana suites, establishing full-stack visibility and real-time dashboards to eliminate configuration errors and proactively resolve bottlenecks.

EDUCATION

California State University Channel Islands **2023 - 2025**
Master of Science, Computer Science *USA*

Shankersinh Vaghela Bapu Institute of Technology, Gujarat Technological University **2019 - 2023**
Bachelor of Engineering (B.E.), Computer Engineering *India*
